

FLEX FARM

Quick Reference Guide

Light Timer

16 hours per day (continuous)

Hydrogen Peroxide (H₂O₂)

Add 1 T — once a week

Target Nutrient Level

Record:

- Base Number (TDS reading of plain water):

 _____

- Target Number (base number + 700):

 _____

- Add 3 T each of Nutrient A and B. In 24 hours, this will raise your base number to near your target number

Reminders:

- Always add equal amounts of Nutrient A and B
- 1 T each of Nutrient A and B = approximately 230 ppm

Pump ON

Target pH: 6.0

(Yellow test color)

- Use three drops of testing solution
- If necessary, adjust pH by adding correct pH solution - 1 T at a time

Water Level

Keep tanks half full (25-30 gallons)

Weekly Maintenance Tips

- Add about 5 gallons of water to maintain water level.
- Test pH and adjust if necessary.
- Add nutrients if TDS reading is 100+ ppm below your target number.
- If TDS reading is above your target number, add more water or refer to the Grow Guide for Deep Cleaning instructions.
- Add 1 T of H₂O₂ once a week to keep your Flex Farm clean.

General Tips

- Make sure Rockwool does not stick out over the top of the plant spaces when transplanting.
- Keep your plants happy! Inspect your farm on a regular basis to make sure they are receiving the water and nutrients they need.
- Deep clean your Flex Farm at least once every 6 months. Deep Cleaning instructions can be found in the Grow Guide.
- Do not allow excessive algae to build up in your snaps. Keep snaps clean to reduce dripping. *(Only applicable to Flex Farms with snaps)*
